

IRONPULSE FITNESS & WELLNESS

GHL Automation System

Executive Summary

A complete lead-to-member automation system built on GoHighLevel (GHL) for a boutique fitness studio in the Philippines. This document provides a high-level overview of the system's capabilities, architecture, and business impact.

Business	IronPulse Fitness & Wellness — Cabuyao City, Laguna, Philippines
System	20 automated workflows on GoHighLevel
Purpose	Convert Facebook & Instagram DM leads into paying members
Date	March 2026

THE BUSINESS PROBLEM

IronPulse Fitness & Wellness generates leads primarily through Facebook and Instagram DMs. When someone messages the business on social media, GHL captures the contact — but with a critical limitation: DM contacts arrive with **no email address and no phone number**. Only the person's social media name is available.

This means no automated emails can be sent, no SMS reminders can go out, and no follow-up sequences can fire — until contact data is collected. Without automation, leads go cold. The coaching team cannot manually follow up with every DM fast enough to convert them.

The Challenges

Challenge	Impact
No contact data from DMs	Cannot send automated email or SMS until data is captured
Slow follow-up	Leads go cold within hours if not contacted quickly
No-show appointments	Booked leads don't attend, and nobody follows up systematically
Member retention	At-risk members leave without any recovery attempt
Revenue expansion	No systematic approach to upselling existing members
Manual operations	Everything depends on the coach remembering to do tasks

THE SOLUTION

A fully automated system of 20 interconnected workflows that handles the entire journey from first DM to long-term member — with zero leads falling through the cracks.

How It Works — The Journey

1. Lead Capture

An AI chatbot (Iris) automatically collects the lead's email and phone number via DM conversation, with built-in follow-ups if they don't respond immediately.

2. Speed to Lead

Within 1 minute of data capture, the lead receives their first email. A 3-email sequence with escalating urgency pushes them to book a Free Fitness Consultation (FFC).

3. FFC Booking

When the lead books, they receive an instant confirmation email plus three timed reminders (24hr, 2hr, 30min before appointment) to reduce no-shows.

4. No-Show Recovery

If a lead misses their appointment, a same-day SMS fires immediately, followed by three recovery emails over 5 days. The team is notified to call.

5. Post-FFC Follow-Up

After attending the FFC, the lead receives a personalized follow-up sequence pushing enrollment. The system waits for confirmed payment — not just another booking.

6. Enrollment

On enrollment, the system fires six workflows simultaneously: welcome email, program-specific onboarding, 30-day check-in series, review request, referral request, and upsell sequences.

7. Member Retention

If a member's attendance drops, the coach tags them as at-risk. A 3-touchpoint recovery sequence fires with escalating urgency. If unresponsive after 14 days, the system auto-cancels.

8. Revenue Expansion

At strategic milestones (30, 60 days), upsell sequences fire for eligible members — Nutrition Coaching, Transformation Program, and Program Upgrades.

9. Reactivation

Dead leads are automatically re-engaged every 90 days with channel-appropriate outreach (email, SMS, or both based on available contact data).

SYSTEM CAPABILITIES

Dual AI Chatbot

Two bots work in sequence — one captures data, one handles FAQs and booking. Seamless handoff between them.

Collision Prevention

A global flag system prevents workflow conflicts. When one automation is running, others wait their turn.

Context-Aware Nurture

Leads who attended an FFC get different follow-up emails than those who no-showed or never booked. Three separate content tracks.

Smart Channel Selection

The system knows what contact data is available and only sends through available channels — email-only, SMS-only, or both.

Auto-Cancel with Override

Unresponsive at-risk members are auto-cancelled after 14 days, but the coach can reverse it at any point.

Quarterly Reactivation Loop

Dead leads cycle through reactivation attempts every 90 days, indefinitely. The system never gives up.

Duplicate Prevention

Every workflow has guards against double-firing, duplicate bookings, duplicate emails, and duplicate pipeline records.

Pause Handling

Members can pause indefinitely. The system waits — no timeout — and sends a Welcome Back when they resume.

ARCHITECTURE AT A GLANCE

Workflows by Function

Function	Scale	Description
Lead Capture	4 workflows	DM data capture, bot management, partial data handling
Speed to Lead	2 workflows	Immediate follow-up for DM and website leads
FFC Appointments	4 workflows	Booking confirmation, reminders, no-show recovery, reschedule
Sales & Onboarding	3 workflows	Post-FFC follow-up, enrollment, program-specific onboarding
Member Retention	3 workflows	Check-ins, at-risk recovery, cancellation win-back
Lead Nurture	2 workflows	30-day short-term and 90-day long-term nurture sequences
Reviews & Referrals	2 workflows	Automated review and referral request systems
Upsells	3 workflows	Nutrition, Transformation, and Program Upgrade upsells
Reactivation	2 workflows	Pause handling and dead lead quarterly reactivation

Three Pipelines

Lead Pipeline tracks the pre-enrollment journey from first DM to enrollment or archival. 12 stages from Data Capture Active through Dead Lead.

Member Pipeline tracks the membership lifecycle from enrollment through cancellation. 5 stages: New Member, Active, At Risk, Paused, Cancelled.

Upsell Pipeline tracks revenue expansion opportunities. 5 stages: Identified, Offer Sent, Considering, Upgraded, Declined.

QUALITY & TESTING

Every workflow was audited against documented specifications using a rigorous 8-step protocol:

Step	Description
1	Map every action from the live GHF build against the written specification
2	Verify all 8 Golden Rules (the system's inviolable architectural principles)
3	Check cross-workflow dependencies — what feeds in, what depends downstream
4	Run scenario stress tests: first-time lead, returning dead lead, cancel-rebook, pause-resume, etc.
5	Analyze simultaneous trigger events for collision risk
6	Check for silent failures — errors that produce no visible warning in GHF
7	Audit human error vulnerabilities — what happens when the coach makes a mistake
8	Issue final verdict: PASS, PASS WITH NOTES, or FAIL

Result: All 20 workflows passed the audit. Zero logical errors. Every edge case handled. Every architectural rule followed. The system is production-ready.

WHAT MAKES THIS BUILD DIFFERENT

Zero Logical Errors

Every workflow has been stress-tested against 15+ edge case scenarios. Duplicate bookings, cancel-rebook cycles, no-show-then-show sequences, pause-resume-cancel flows — all handled.

Collision Prevention Architecture

A system.in-workflow flag ensures that when one workflow is processing a contact, no other workflow interferes. Every workflow that adds this flag removes it at every possible exit point — a discipline that prevents the #1 cause of GHL automation bugs.

Context-Aware Communication

The nurture system doesn't send the same generic email to everyone. Leads who attended an FFC get personal enrollment-focused follow-ups. No-shows get understanding, zero-judgment rebook messages. Cold leads get educational, social-proof content.

Defensive Design

Every If/Else branch has a None/catch-all handler. Every Find Opportunity has both Found and Not Found paths. Every workflow has guards against duplicate triggers. The system assumes things will go wrong and handles it gracefully.

Complete Documentation

This is not just a set of workflows — it's a fully documented system with specifications, architectural rules, edge case catalogs, collision analysis, and operational procedures. Any GHL professional can understand, maintain, and extend it.

Human Error Resilience

The system accounts for real-world coach mistakes: wrong tag order, missing program tags, accidental tag additions. Built-in guards catch the most dangerous errors, and the SOP documents how to prevent and recover from the rest.

Full technical details are available in the Master Blueprint document, which includes complete workflow specifications, tag structure, pipeline definitions, and the full edge case catalog. A separate SOP document provides the team's daily operational procedures.
