

IRONPULSE FITNESS & WELLNESS

GHL Automation System

Standard Operating Procedures

This document contains every manual task required to keep the IronPulse automation system running correctly. It is the daily playbook for coaches, administrators, and staff. Following these procedures exactly ensures that the automation works as designed.

IMPORTANT: The automation system depends on human actions being performed in the correct order with the correct tags. Skipping steps or doing them out of order will cause the wrong emails to be sent, the wrong workflows to fire, or contacts to be permanently locked out of the system. When in doubt, refer to this document.

TABLE OF CONTENTS

1. Daily Tasks
2. Enrolling a New Member
3. Re-Enrolling a Cancelled Member
4. Pausing and Resuming a Membership
5. Handling At-Risk Members
6. Cancelling a Member
7. Upsell, Review, and Referral Tasks
8. Tags You Should NEVER Touch
9. Tags You SHOULD Use (and When)
10. Recommended Team Structure
11. Common Mistakes and How to Fix Them

1. DAILY TASKS

Task	Who	When	Instructions
Check GHL task list	All staff	Start of day	Review all open tasks. Complete or reassign overdue tasks. Tasks with no action cause leads to fall through the cracks.
Respond to internal notifications	Assigned staff	Throughout day	Check the GHL notification bell. Every notification requires a human action — follow up on new leads, call no-shows, reach out to at-risk members.
Monitor new DM leads	Messaging team	When notified	Review bot conversations. If the lead asks questions the bot cannot handle, take over manually.
Confirm FFC appointments	Admin	Day before	Call or message leads who have not confirmed their FFC to reduce no-show rate.

2. ENROLLING A NEW MEMBER

CRITICAL: These steps **MUST** be done in this exact order. Wrong order = wrong emails sent, wrong workflows fired, or duplicate records created. Do not skip steps.

Step	Action	Details
1	Confirm payment received	Verify in payment system. Do NOT proceed until payment is confirmed. No exceptions.
2	Add member.active tag	Go to the contact's Tags field. Add member.active. This fires 6 workflows simultaneously: welcome email, onboarding, check-ins, referral request, nutrition upsell, and program upgrade upsell.
3	Add program tag within 10 MINUTES	Add ONE of: program.personal, program.semi-private, program.group, program.nutrition, program.transformation, or program.trial. The onboarding workflow checks for this tag after 10 minutes. If you miss the window, you'll be notified to send the onboarding email manually.
4	Update Member Pipeline manually	Go to Opportunities tab. Move the Member Pipeline opportunity to Active Member stage.
5	Send personal welcome message	Go to the Conversations tab. Send a personal touch message within 24 hours.

What Happens Automatically After Step 2

The moment you add member.active, the system automatically sends a Welcome email (WF-08), waits 10 minutes then sends the program-specific onboarding email (WF-09), starts the 30-day check-in series (WF-10), queues a review request for 30 days later (WF-15), queues a referral request for 60 days later (WF-16), queues the nutrition upsell for 30 days later (WF-17), and queues the program upgrade upsell for 60 days later (WF-23). You do not need to do anything else — the system handles everything from here.

3. RE-ENROLLING A CANCELLED MEMBER

CRITICAL: The order of these two tags matters. Adding them in the wrong order sends the wrong welcome email. There is no automated way to fix this.

Step	Action	Details
1	Confirm payment received	Same as new enrollment — no exceptions.
2	Add member.reactivated tag FIRST	This tells the system to send a 'Welcome BACK' email instead of a new 'Welcome' email.
3	Add member.active tag SECOND	This fires all enrollment workflows. The system detects member.reactivated and routes to the Welcome Back email.
4	Add program tag within 10 minutes	Same as new enrollment.
5	Update pipelines manually	Lead Pipeline: move to Enrolled (Won). Member Pipeline: move to Active Member.

What happens if you add member.active before member.reactivated? The system sends a new 'Welcome to IronPulse' email instead of 'Welcome BACK to IronPulse.' The member gets the wrong email. This cannot be corrected — the email is already sent.

4. PAUSING AND RESUMING A MEMBERSHIP

To Pause a Membership

Add the **member.paused** tag to the contact. The system will automatically remove member.active, send a pause confirmation email and SMS, notify the team, create a follow-up task, and update the Member Pipeline to Paused. The system then waits indefinitely — there is no timeout on a pause.

To Resume a Membership

Add the **member.active** tag to the contact. Do NOT add member.reactivated — that is only for cancelled members returning, not for paused members resuming. The system will automatically remove member.paused, send a Welcome Back email (handled by WF-19, not WF-08), restart the check-in series from Day 1, and update the Member Pipeline back to Active Member.

Remember: Pause resume = just add member.active. Re-enrollment after cancellation = add member.reactivated FIRST, then member.active. These are different processes.

5. HANDLING AT-RISK MEMBERS

When you notice a member's attendance dropping or they seem disengaged, add the **member.atrisk** tag to their contact. This fires a 3-touchpoint recovery sequence:

When	What Happens
Day 1	System removes member.active internally. Email + SMS + notification + task for personal outreach call.
Day 5	Email + SMS + notification + task for follow-up call
Day 14	Email + SMS + notification + task for final decision
Day 14 + 48hrs	If no response: AUTOMATIC cancellation. You are notified immediately.

What You Need to Do

At each touchpoint, you'll receive a notification and a task. **Make the call.** The emails and SMS are automated, but the personal phone call is what actually saves the member.

If the member re-commits at any point, add **member.active** to their contact. The at-risk sequence stops immediately. The system automatically restores the Member Pipeline to Active Member and removes the member.atrisk tag.

If the system auto-cancels (Day 14 + 48hrs) and you want to reverse it, add **member.active** immediately. The cancellation recovery workflow will detect it and stop.

6. CANCELLING A MEMBER

Cancellation can happen two ways: automatically (via WF-11 auto-cancel after at-risk recovery fails) or manually (when the coach decides).

Manual Cancellation

Add the **member.cancelled** tag. The system automatically removes member.active, sends a cancellation win-back email and SMS, notifies the team, creates a win-back call task, and waits 7 days for the member to return. If they don't return, the system formally closes the membership and moves the lead into long-term nurture (90-day email sequence).

Always try at-risk recovery (member.atrisk) before cancellation (member.cancelled). The at-risk sequence gives the member 14+ days of recovery attempts. Going straight to cancellation skips this entirely.

7. UPSELL, REVIEW, AND REFERRAL TASKS

Most upsell, review, and referral actions are automated. Your role is to add specific tags when a member takes action, so the system can respond correctly.

Situation	Tag to Add	When to Add
Member purchases Nutrition Coaching (via WF-17 upsell)	upsell.nutrition-converted	Immediately after payment. Stops the upsell email sequence.
Member joins Transformation cohort (via WF-18)	upsell.transformation-converted	Immediately after payment. Stops the upsell emails.
Member upgrades their core program (via WF-23)	upsell.upgrade-converted	Immediately after commitment confirmed. Stops the upsell.
Member leaves a Google/Facebook review	review.completed	After confirming the review is live online. Stops the review follow-up.
A referred lead enrolls as a new member	referral.converted	After confirming the referred lead enrolled. Stops the referral follow-up.
Launching a new Transformation cohort	upsell.transformation-offer (bulk add)	Add this tag to ALL eligible members. Fires WF-18 for each.

After a member responds to any upsell, manually update the Upsell Pipeline: move to Considering, Upgraded, or Declined as appropriate.

8. TAGS YOU SHOULD NEVER TOUCH

These tags are managed by the automation system. Adding or removing them manually can break workflows, send wrong emails, or permanently lock contacts out of the system.

Tag	Why You Should Not Touch It
system.in-workflow	Collision prevention flag. Manually adding this PERMANENTLY locks the contact out of all workflows with NO error message. If you accidentally add it, remove it immediately.
contactinfo.qualified	Set by the bot system when both email and phone are captured.
contactinfo.partial	Set by the bot system when only one identifier is captured.
contactinfo.unqualified	Set by the bot system when no data is captured.
appt.booked	Set automatically when a lead books an FFC.
appt.showed	Set automatically when appointment is marked as Showed.
appt.noshow	Set automatically when appointment is marked as No-Show.
appt.cancelled	Set automatically when appointment is cancelled.
lead.nurture-short	Set by workflows when a lead needs 30-day nurture.
lead.nurture-long	Set by workflows when a lead needs 90-day nurture.
lead.dead	Set by workflows when all nurture attempts are exhausted.
lead.reactivated	Set by workflows when a dead lead re-engages.
onboarding.completed	Set by onboarding workflow after sending program email.
source.fb-dm / source.ig-dm / source.website	Set by capture workflows. Identifies lead origin.

9. TAGS YOU SHOULD USE (AND WHEN)

Tag	When to Add
member.active	When enrolling a new member (after payment confirmed) or resuming from pause.
member.atrisk	When a member's attendance drops or they seem disengaged.
member.paused	When a member requests a temporary pause.
member.cancelled	When formally cancelling a membership (try at-risk first).
member.reactivated	ONLY when re-enrolling a previously cancelled member. Add BEFORE member.active.
program.personal / .semi-private / .group / .nutrition / .transformation / .trial	Within 10 minutes of adding member.active. Add ONE only.
upsell.nutrition-converted	When member purchases Nutrition Coaching from upsell sequence.
upsell.transformation-converted	When member joins Transformation from upsell sequence.
upsell.upgrade-converted	When member upgrades their core program from upsell sequence.
review.completed	When you confirm a member's review is live online.
referral.converted	When a referred lead enrolls as a paying member.
upsell.transformation-offer	Bulk add to eligible members when opening a new Transformation cohort.

10. RECOMMENDED TEAM STRUCTURE

Role	Responsibilities	GHL Access	When to Hire
Head Coach / Owner	Enrollment decisions, program assignments, at-risk recovery, upsell conversations, FFC delivery	Full admin access	Day 1
Admin / Lead Manager	Monitor DM leads, call qualified leads within 30 min, manage FFC calendar, no-show follow-up	Contacts, Conversations, Calendar, Tasks	Day 1
Messaging Team (1-2)	Monitor bot conversations, take over for complex questions, flag hot leads	Conversations only	20+ DMs/day
Retention Coach	At-risk calls, cancellation win-backs, monthly check-in task reviews	Contacts, Pipelines, Tasks	30+ active members

11. COMMON MISTAKES AND HOW TO FIX THEM

Mistake	What Happens	How to Fix
Added member.active before member.reactivated	Wrong welcome email sent (new instead of welcome back).	Cannot undo the email. For next time, always add member.reactivated first.
Forgot to add program tag within 10 minutes	You'll receive a notification saying 'No program tag found.' Send the onboarding email manually.	Add the program tag now for future reference. The tag is still needed for upsell logic.
Accidentally added system.in-workflow	Contact is permanently locked out of all workflows. No error message shown.	Remove the tag immediately. Check if the contact missed any important workflows.
Added member.cancelled instead of member.atrisk	Member skips the 3-touchpoint at-risk recovery and goes straight to cancellation.	If caught quickly: remove member.cancelled, add member.atrisk. If too late: the cancellation win-back sequence is already running.
Added member.active twice	GHL will not re-add an existing tag, so the trigger won't fire again. Safe.	No action needed. This is handled by GHL's built-in tag behavior.
Added member.paused when meaning to resume	WF-19 fires pause handling instead of resuming.	Remove member.paused. Then add member.active to resume correctly.

When in doubt, check this document first. If you're unsure which tag to add or in what order, refer to the relevant section above. Getting it right the first time is always easier than fixing it after the wrong workflow has fired.
